CONTENTS

I DAILY SOLAR INDICES

- (a) Relative Sunspot Numbers and 2800 Mc/s Solar Flux - August - September 1964
- (b) Graph of Sunspot Cycle

II SOLAR CENTERS OF ACTIVITY

- (a) Calcium Plage and Sunspot Regions - September 1964
- (b) Magnetic Classifications of Sunspots (Mt. Wilson) - September
- (c) Provisional Coronal Line Emission Indices - September 1964

III SOLAR FLARES

- (a-g) Optical Observations - September 1964
- (h) Flare Patrol Observations - September 1964
- (i-k) Optical Observations - June 1964
- (l) Flare Patrol Observations - June 1964
- (m) Ionospheric Effects (SWF-SEA-SCNA-SPA SES-SFD-Bursts) - August 1964
- (n) 26 Mc/s - Riometer Events (South Pole) - August 1964

IV SOLAR RADIO WAVES

- (a) 2800 Mc/s Outstanding Occurrences (ARO-Ottawa) - September 1964
- (b) 169 Mc/s Interferometric Occurrences (Nancay) - September 1964
- (c) 108 Mc/s Outstanding Occurrences (NBS-Boulder) - September 1964
- (d) 7.6-41 Mc/s Spectral Observations (HAO-Boulder) - September 1964
- (e-i) 9.1 cm Spectroheliograms (Stanford) - September 1964

V COSMIC RAY INDICES

- (a) Climax Neutron Monitor - August 1964
- (b) Deep River Neutron Monitor - Deep River-August 1964

VI GEOMAGNETIC ACTIVITY INDICES

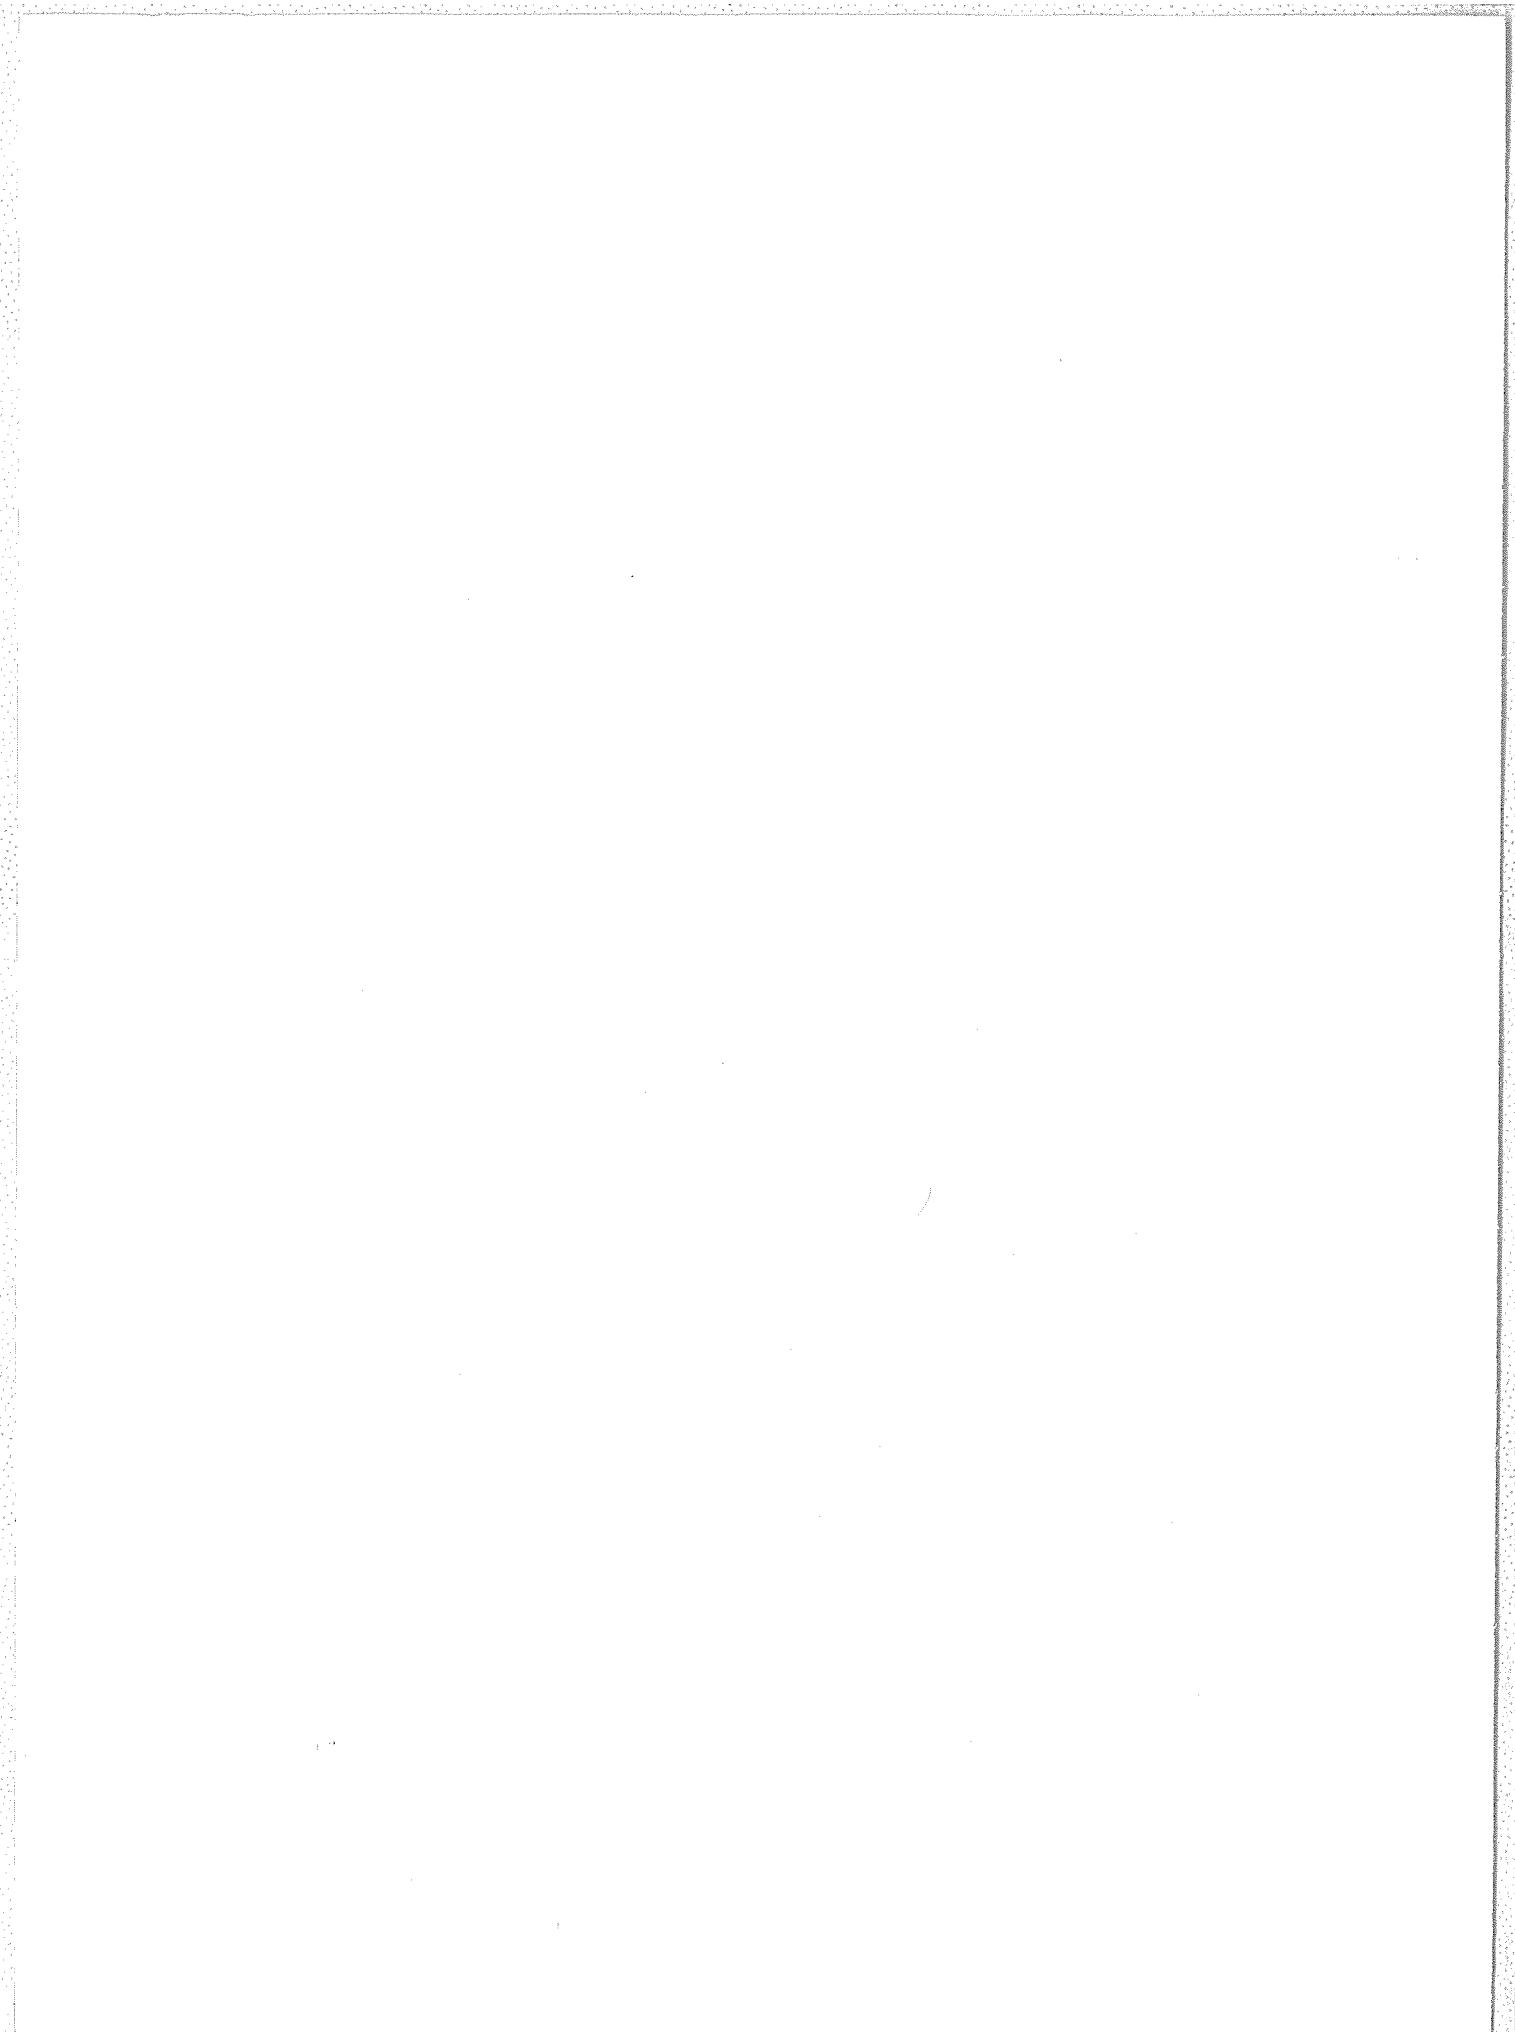

- (a) C, K_p, A_p and Selected Quiet and Disturbed Days - August 1964
- (b) Chart of K_p by Solar Rotations - 1964

VII RADIO PROPAGATION QUALITY INDICES

- (a) CRPL Quality Figures and Forecasts - North Atlantic and North Pacific - August 1964
- (b) Graphs Comparing Forecasts and Observed Quality - North Atlantic and North Pacific - August 1964
- (c-d) Graphs of Useful Frequency Ranges - North Atlantic - August 1964

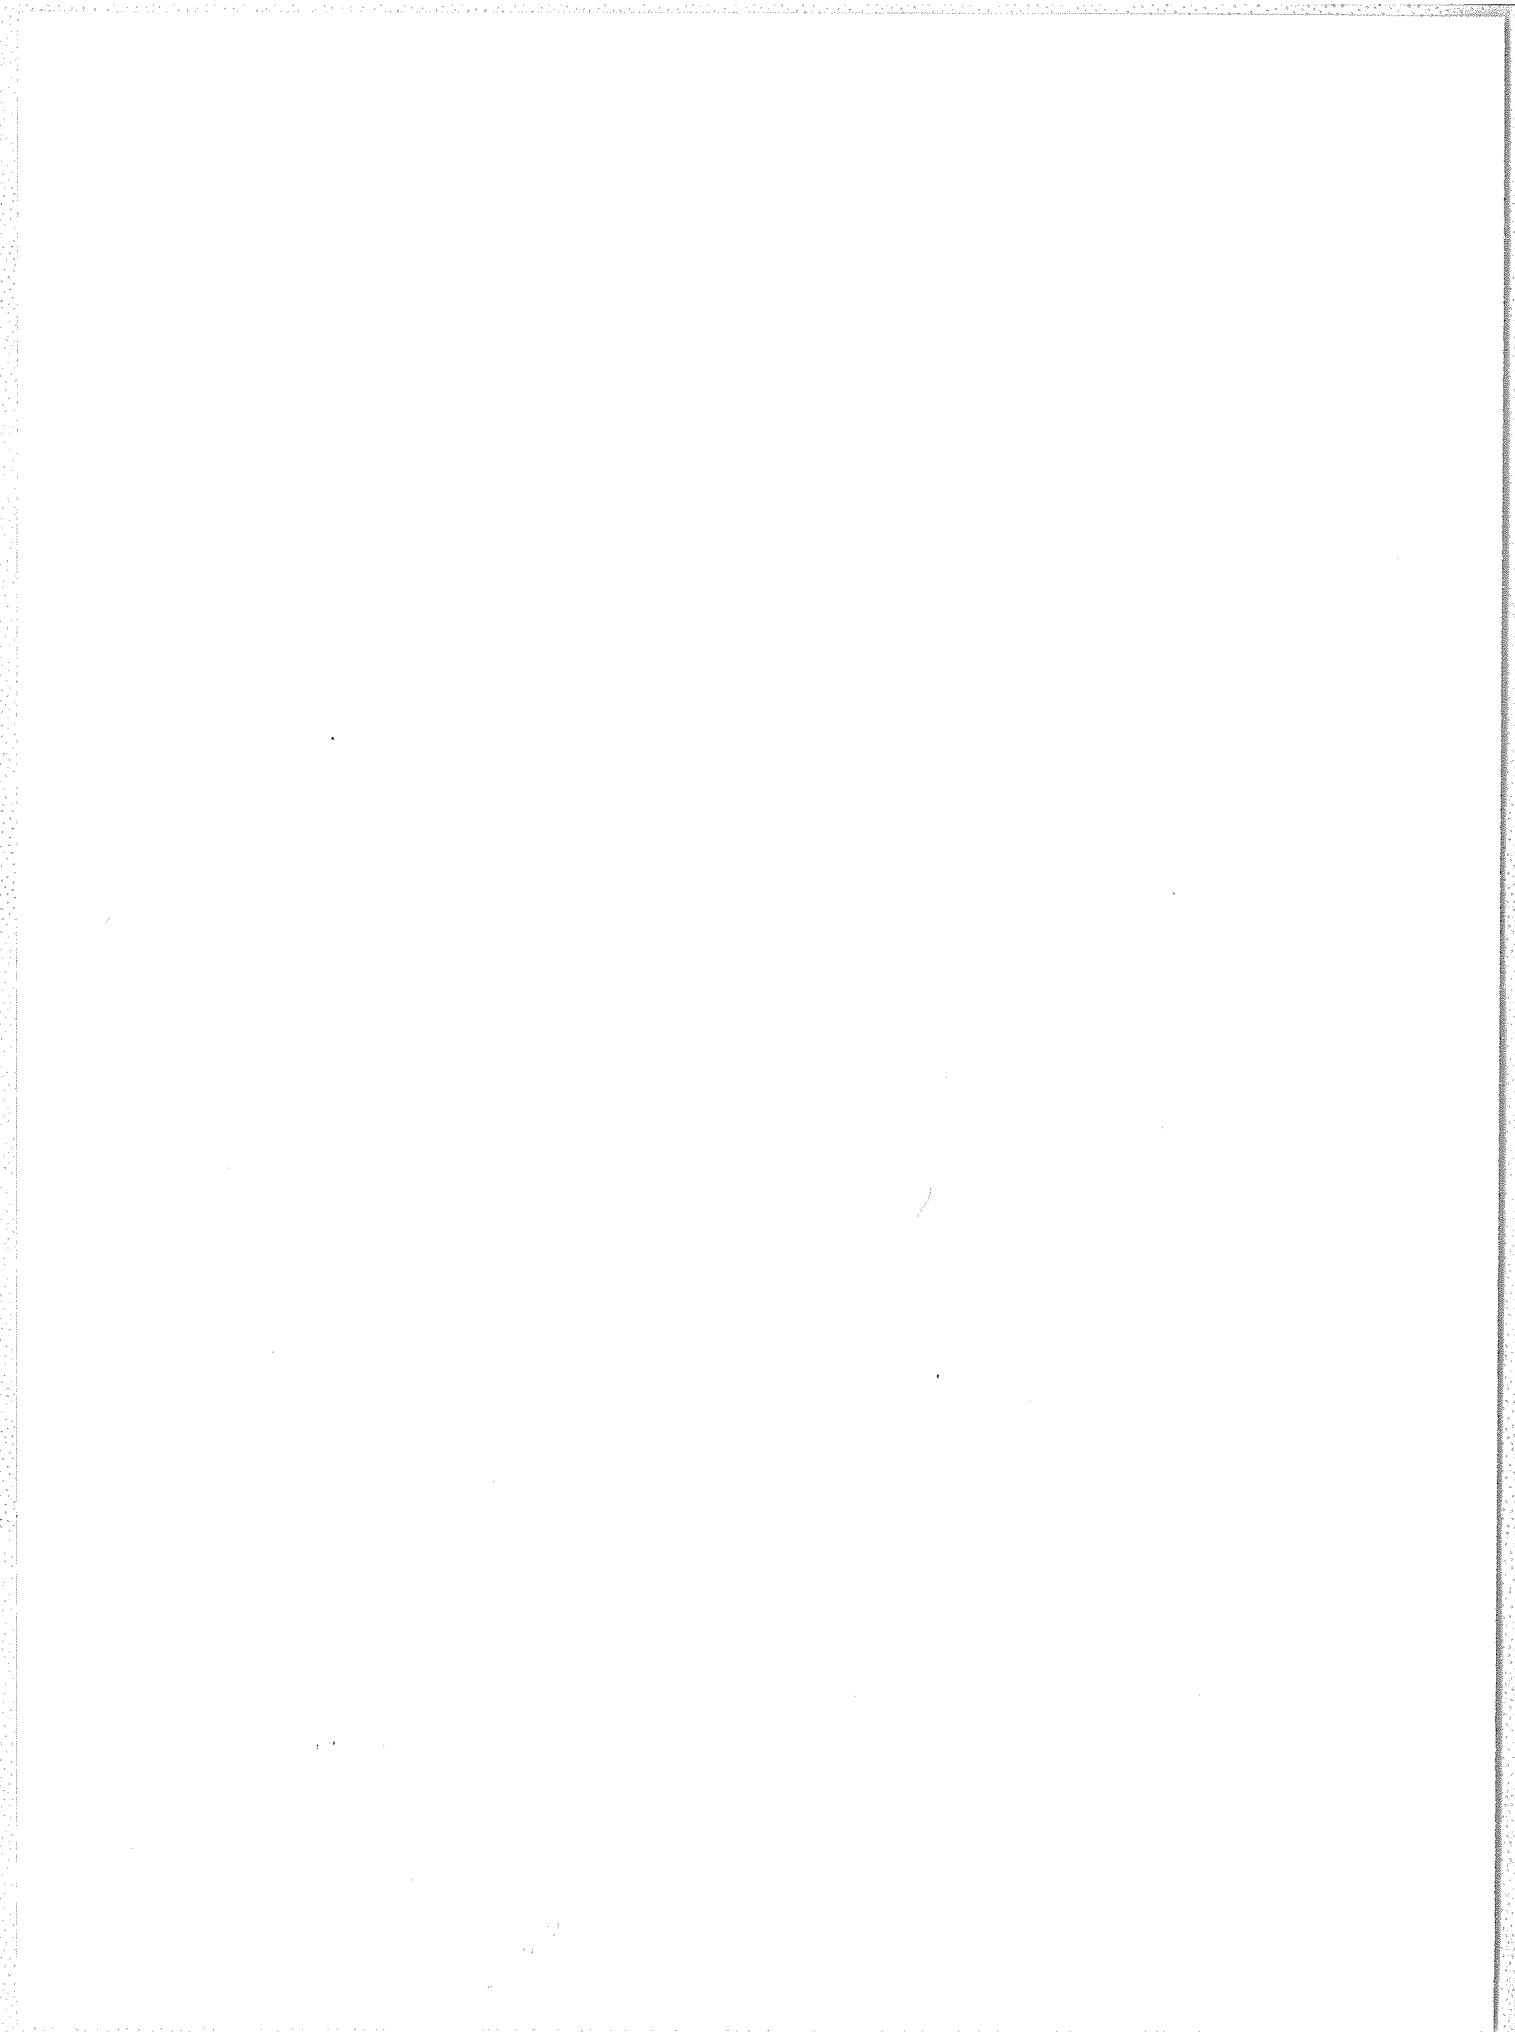

VIII ALERT PERIODS AND SPECIAL WORLD INTERVALS

- (a) IQSY Alert Periods - September 1964

The descriptive text was republished November 1963.

Addenda to the text were published August and September 1964.

The Present Sunspot Minimum And Short-Term Predictions For The New Cycle

by R. G. Giovanelli, C.S.I.R.O., Sydney, Australia

A method of analyzing sunspot minima, based on the rate of appearance of new spot groups, has recently been described by R. G. Giovanelli (Observatory, 84, 57 (1964), who finds that time-plots for the decaying cycles are very reproducible from one minimum to another. The curves for the new cycles are almost as reproducible, the main difference between the various minima being the phase of onset of the new cycle.

Giovanelli and Miss McCabe believe that there is now just sufficient data on which to base a prediction for the new cycle. In Fig. 1 they have plotted the rates of appearance of new spot groups of both old and new cycles against solar rotation. The continuous curves are the mean decay and rise curves for previous minima this century, fitted to current observations. Old cycle points are indicated by dots, new by crosses. The broken lines are the theoretical quartile curves which, because of statistical fluctuations, should divide the observed points into four sets containing equal numbers.

The cross-over of the two curves, which is close to solar minimum, is believed to be about rotation No. 1483, which commenced on July 12, 1964. The height of the cross-over point is greater than at any previous minimum this century, suggesting that the sun will not be as quiet as during the previous minima. On their prediction, the new cycle is now dominant over the old.

COMMERCE - STANDARDS - BOULDER

- (1) No calcium plague observations were secured at the McMath-Hulbert Observatory on Sept. 18-19, 1964.
 (2) These very small and ephemeral plages last for only one day.
 (3) Plage 7478 is in the same position as the short-lived plage 7446 of the preceding rotation.
 (4) Plage 7504 is new, in the same position as ephemeral plage 7498.
 (5) Plage 7508 is new, in the same position as ephemeral plage 7502.

HOURS OF OBSERVATION, JULY, AUGUST, SEPTEMBER, 1964

OBSERVING PERIOD:

July	11:00 - 01:55 UT
August	11:10 - 01:50 UT
September	11:40 - 01:30 UT

With the following exceptions:

(1) Observations commenced: July 22 at 12:10 UT
 Aug. 1 at 13:20 UT
 3 at 12:25 UT
 5 at 12:10 UT
 22 at 13:00 UT
 24 at 12:30 UT
 27 at 12:10 UT
 28 at 12:20 UT
 29 at 12:10 UT
 Sep. 4 at 13:50 UT
 5 at 12:10 UT
 11 at 12:15 UT

(2) Observations ended: July 3 at 00:30 UT
 Aug. 18 at 22:50 UT
 Sep. 6 at 22:50 UT
 8 at 00:20 UT
 27 at 22:20 UT

(3) Interruption of observations, approximately 20 minutes in duration,
 for calibration purposes:
 In the period 14:00 - 15:00 UT
 July 21 & 22
 Aug. 25 to 31 inclusive
 Sep. 1 to 30 inclusive

(4) Interference or set trouble obscuring records on:
 July 31 13:35 to 15:15 UT
 Aug. 26 12:50 to 14:00 UT
 Sep. 14 12:20 to 14:45 UT
