Solar - Geophysical Data

NO. 437 JANUARY 1981

Part I (Prompt Reports)

DATA FOR
DECEMBER 1980
NOVEMBER 1980

NATIONAL GEOPHYSICAL AND SOLAR - TERRESTRIAL DATA CENTER
BOULDER, COLORADO

For obtaining bulletins on a data exchange basis, send request to: World Data Center A for Solar-Terrestrial Physics, NOAA/EDIS/NGSDC, D631, 325 Broadway, Boulder, Colorado 80303.

For sale through the National Geophysical and Solar-Terrestrial Data Center, NOAA/EDIS, D631, 325 Broadway, Boulder, Colorado 80303. Subscription Price: $46.00 annually for both part I (Prompt Reports) and part II (Comprehensive Reports) or $24.00 annually for either part. Annual supplement containing explanation is included. For foreign mailing add $32.00 for both parts or $16.00 for either part. Single issue price is $2.00 for either part and $1.75 for the extra issue. Make checks and money orders payable to: Department of Commerce, NOAA/NGSDC. Note: $3.00 handling charge per order.

To standardize referencing these reports in the open literature, the following format is recommended:
Solar-Geophysical Data, 426 Part I (or Part II), pages, February 1980, U.S. Department of Commerce (Boulder, Colorado, U.S.A. 80303).

SOLAR-GEOPHYSICAL DATA

No. 437

Issued in two parts

Helen E. Coffey, Editor

J. Virginia Lincoln, Chief
Solar-Terrestrial Physics Division

CONTENTS

Part I (Prompt Reports)

	PAGE
Index for 1979-1980	2
Data for December 1980	3-49
Data for November 1980	51-172
Late Data	173-176
Geomagnetic Indices	
Sudden Commencements October 1980	
Cosmic Rays Huancayo Jul-Sep 1980	

Part II (Comprehensive Reports)

Index for 1979-1980	2
Data for July 1980	3-37
Note on Delay of Solar Flare Data	4
Miscellaneous Data	39-51
Synoptic Solar Maps May 8-Jun 12, 1980	
Active Regions May 8-Jun 12, 1980	
Energetic Solar Particles Jan 1980	
Reduced Magnetograms 1979

Notes:

"426A 50" listed under 1979 Dec means that the sunspot drawings for Dec 1979 were contained in Solar-Geophysical Data Number 426 - Part I, beginning on page 50.

A = Part I, B = Part II.

----- = no data available.
blank = data not yet received.

*An asterisk denotes a value of the observed monthly mean, or the observed 12-month running mean, or the predicted 12-month average that is based only on preliminary observations of the Zurich relative sunspot number (Rz). Parentheses enclose the 90% confidence limits. Hatched boxes enclose the most recent smoothed values; boxes not shaded enclose predicted values. Ra is the new symbol for R_A'.

The table gives observed Zürich *smoothed* sunspot numbers for Cycle 21 up to the one calculated from the latest observed data, marked by a vertical bar. They are based on final Zürich numbers through 1979 and provisional Zürich numbers thereafter. Some of these data after the June 1976 value will change slightly when final data for 1980 are included. The numbers after the vertical bar are predictions by the McNish-Lincoln method (see *Explanation of Data Reports,* February 1980). Shown in parentheses are the corresponding absolute values of the 90% confidence interval, an indication of the uncertainty above and below the predicted number.

The McNish-Lincoln prediction method is recommended for predictions up to only one year ahead. From that point, the predictions regress rapidly toward the mean value. Furthermore, the method is very sensitive to the identification of a minimum epoch. In SGD issues 390-401, the Cycle 21 predictions were based on March 1976 as the minimum epoch. Later studies, including one published by Waldmeier, show that June 1976 is the more appropriate epoch of minimum. Thus, we adopted a June 1976 minimum.

*MAXIMUM OF SUNSPOT CYCLE 21. The most recent observed smoothed sunspot value suggests the maximum occurred in the interval December 1979 - January 1980. The uncertainties, however, in the predicted numbers indicate it is still too early to claim these 2 months as the period in which the true peak in the curve occurred.

"REMARKS":

A = Eruptive prominence whose base is less than 90° from central meridian.
B = Probably the end of a more important flare.
C = Invisible 10 minutes before.
D = Brilliant point.
E = Two or more brilliant points.
F = Several eruptive centers.
G = No visible spots in the neighborhood.
H = Flare accompanied by high-speed dark filament.
I = Active region very extended.
J = Distinct variations of plage intensity before or after the flare.
K = Several intensity maxima.
L = Existing filaments show signs of sudden activity.
M = White-light flare.
N = Continuous spectrum shows effects of polarization.
O = Observations have been made in the H and K lines of CaII.
P = Flare shows helium D3 in emission.
Q = Flare shows Balmer continuum in emission.
R = Marked asymmetry in H-alpha line suggests ejection of high-velocity material.
S = Brightness follows disappearance of filament in same position.
T = Region active all day.
U = Two bright branches, parallel or converging.
V = Occurrence of an explosive phase: important, expansion within roughly 1 minute that often includes a significant intensity increase.
W = Great increase in area after time of maximum intensity.
X = Unusually wide H-alpha line.
Y = System of loop-type prominences.
Z = Major sunspot umbra covered by flare.

INTERVALS OF NO FLARE PATROL OBSERVATION

FOR PRECEDING SOLAR FLARE TABLE

DECEMBER 1980

Observatories included in total patrol:

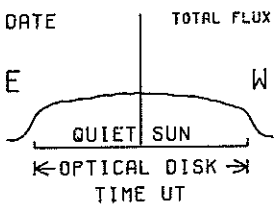

Athens	Culgoora	Istanbul	Manila	Peking	Ramey
Bucharest	Holloman	Learmonth	Palehua	Purple Mt.	Wendelstein

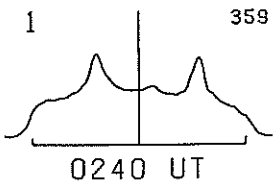

Times of no flare patrol are shown by the shaded area for each day divided into times of no cinematographic patrol (bottom half of day) and times of neither visual nor cinematographic patrol (top half of day).

VMID IS A MEAN AND VPK IS A MAXIMUM VELOCITY IN THE IPS SCATTERING REGION.
THE REGION'S CENTROID IS SPECIFIED BY LAT, DIST, DLON.
LAG AND ROTATION NUMBER GIVE MAPPING TO EARTH AND SUN AT VMID.
* INDICATES NO ERROR AVAILABLE, SINCE ONLY TWO ANTENNAS WERE OPERATING.

= definitely towards the sun = definitely away from the sun

T = towards the sun A = away from the sun * = effect doubtful or not discernible - = missing data

The table shows daily inferences of the polarity of the interplanetary magnetic field. The first half of the day is based principally on magnetograms produced by the magnetometer at the Vostok Antarctic Station of the USSR. The magnetometer of the U.S. Air Weather Service now operated at Thule by the Danish Meteorological Institute is used for the second half of the day.

STANFORD MEAN SOLAR MAGNETIC FIELD

POLARITY OF THE MEAN SOLAR MAGNETIC FIELD: □ = FIELD >2μT, ▥ = -2μT ≤FIELD ≤2μT, ■ = FIELD <-2μT

No box visible indicates no data available for that day.

NOTE: Data are taken daily at 2000 UT. Dates given are not Bartels Rotation dates. These earlier dates correspond to the occurrence of phenomena on the Sun that affect the Earth during the given Bartels Rotation.

BOULDER GEOMAGNETIC SUBSTORM LOG

DECEMBER 1980

DATE	ONSET TIME	DIR	COMMENTS
12/01			Field unsettled through 1600 UT.
	0250	East	Boulder in partial ring current system.
	0905		Weak SS vicinity College.
	1135		SS vicinity College.
	1220	West	
12/02			Field slightly unsettled.
12/03	0710	West	
	0900		Polar Cap SS; Cape Parry to Sachs Harbour.
	1055	West	
	1255		Localized SS vicinity College.
	1635		Slow onset.
12/04	0335		Weak SS. Boulder in partial ring current sector
	0725	≈ Center	Weak SS
12/05			Quiet day
12/06			Quiet day
12/07	1100		Weak SS. Balance of day quiet.
12/08			Field slightly unsettled.
12/09	0630	West	Weak SS, several minor injections with recovery near 0830 UT.
	1600		Weak SS, slow onset.
12/10			Field unsettled with no distinctive SS activity.
12/11	1008	SSC	Field active balance of day.
	1310	West	
	1615		
	1940		Sharp negative impulse H-component all mid/low latitude stations.
12/12			Field unsettled 0700-1400 UT, quiet balance of day.
	1045	West	
12/13			Field intermittently unsettled.
	0740	West	Weak SS
12/14			Field unsettled 1000-2000 UT.
	1020		Weak SS
	1105		Weak SS
12/15	0580	East	Weak SS
	1125		Localized SS, College to Arctic Village.
	1615		Localized SS, College to Inuvik.
12/16			Field active 0830-1800 UT.
	1215	West	
	1505		Several injections with recovery near 1800 UT.
12/17			Quiet day
12/18	0730		Slow onset, several injections with recovery near 1040 UT.
	1550		Slow onset with recovery near 1900 UT.
12/19	0456	SSC	Magstorm follows with recovery near 2100 UT. The onset of a strong ring current began at Boulder at 1300 UT with a maximum deflection from the quiet day curve of approx. 210 gammas near 1800 UT.
	0725	East	Moderate SS
	1325	West	Very strong SS with recovery near 1700 UT.
12/20			Field intermittently unsettled with no distinctive SS activity.
12/21			Field intermittently unsettled.
	0925	West	
12/22			Field unsettled 0730-1300 UT. Minor injection processes with varied response. No distinctive network SS activity.
12/23	0900	West	
12/24			Quiet day.
12/25	1130	West	Recovery near 1400 UT.
12/26	1020	West	Weak SS
	1320	West	Weak SS
12/27	0625	≈ Center	Weak SS
	1050	West	Moderate SS, several injections with recovery near 1500 UT.
12/28			Field slightly unsettled.
12/29			Field unsettled 0600-1600 UT.
	1135	West	Weak SS
	1310	West	Weak SS
12/30	0740		Sharp positive impulse H-component all mid/low latitude stations. Coincident SS at Lynn Lake.
	0905	East	
	1030	West	Several injections with recovery near 1300 UT.
12/31			Field intermittently unsettled with no distinctive SS activity.

The symbols used under the column heading SPECTRAL TYPE have the following definitions:

B = Single burst
G = Small group (< 10) of bursts
GG = Large group (> 10) of burst
C = Underlying continuum (particularly with Type I)
S = Storm in the sense of intermittent but apparently connected activity
N = Intermittent activity in this period
U = U-shaped burst of Type III

RS = Reverse slope burst
DP = Drifting pairs
DC = Drifting Chains
H = Herringbone
W = Weak
P = Pulsations
CONT = Continuum
UNCLF = Unclassified activity
DCIM = Fast drift

Data not available at time of publication.

For less than 24-hour coverage, parentheses enclose the number of hours for which data are available. For Climax and Huancayo, parentheses enclose the number of section hours whenever the sum of both sections falls below 40 hours.

Quiet days (Q) and disturbed days (D), geomagnetic planetary three-hour-range indices (Kp) (integers alone are equivalent to those normally given with a small zero), magnetic character figures (Cp), and average amplitude (Ap) (unit 2 nT) prepared by Geophysikalisches Institut at the University of Göttingen, F.R. of Germany for the International Service of Geomagnetic Indices. Ten most quiet days [Q1-Q0(10)] and five most disturbed days [D1-D5] are ordered from most quiet or disturbed, respectively. A or K means "not really quiet" (A = "Ap>6", K = "Ap≤6 but one Kp≥30 or two Kp values≥3-"). An asterisk means "not really disturbed" (Ap<20).

Geomagnetic three-hourly indices Km, Kn, Ks, daily mean values Am, An, As (unit 1nT), and indices aa are prepared by M. Menvielle of the Institut de Physique du Globe, Paris, France. For aa indices daily north (N) and south (S) values, and half-daily antipodal mean (M) values are given. Quiet 24-hour and 48-hour intervals centered on 1200 UT are indicated for really quiet as C and for quiet but with some slightly disturbed three-hour intervals as K. The first hundred years series of aa is in IAGA Bulletin №33, and complementary data are in IAGA Bulletin №39.

have not been received.

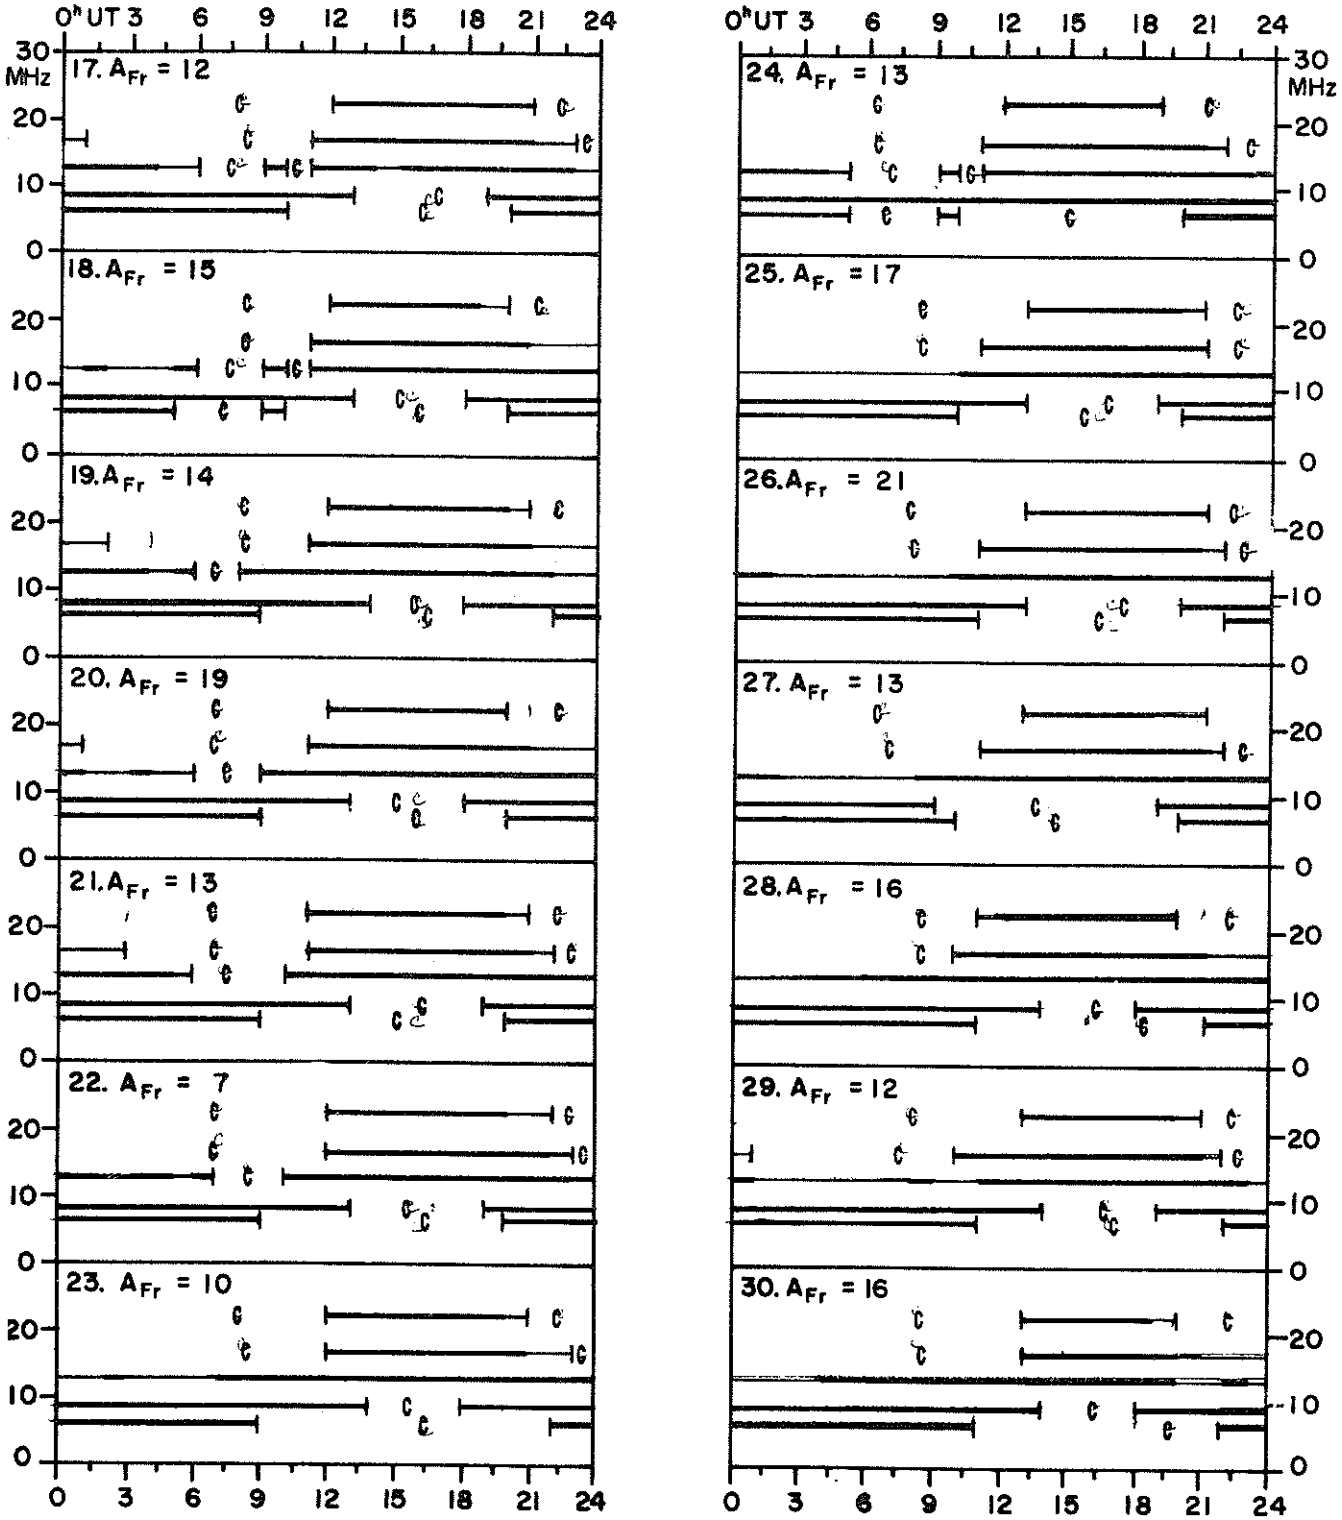

TRANSMISSION FREQUENCY RANGES -- NORTH ATLANTIC PATH

NOVEMBER 1980

TRANSMISSION FREQUENCY RANGES -- NORTH ATLANTIC PATH

NOVEMBER 1980

Field strengths from five frequencies, 6.4, 8.6, 13.0, 17.0 and 22.5 MHz observed on a Lüchow-New York circuit are represented above. Heavy solid lines represent field strengths ≥-12 dB above 1 μv/m (transmitter power reduced to 1 kW). Observed field strengths between -12 dB above 1 μv/m and -40 dB above 1 μv/m are represented by the fine line.

WORLD DATA CENTER A
FOR
SOLAR-TERRESTRIAL PHYSICS

The ICSU Panel on WDCs has recommended that it would be appropriate courtesy to acknowledge in publications that data were obtained from the originating station or investigator through the intermediary of the WDCs. The following statement is suggested:

"Data used in this study were provided by WDC-A for Solar-Terrestrial Physics, NOAA E/GC2, 325 Broadway, Boulder Colorado 80303, USA."
