

Date: 4 June, 1961.

Observer: Parmenter

Times: 17:55 — 18:15 ut. ← "Plotter" → 18:20 — 19:00 ut. Spectroheliograph (H $\alpha$ )

Sky Condition: clear blue - drifting, fleecy, white, clouds/p

Solar Limb: Very excellent !/p

Apparatus Used: 7" Image Integrated-Light "Plotter" → 10" aperture Spectroheliograph (in H $\alpha$ )

Remarks: Further observations, some 2 hours later, showed a "general modification" of limb material, but suspected "flare building" around spot-groups had not developed.
