

Date: 25, June, 1961 Observer: - Parmenter
 Times: 17:20 ← inclusive → 17:40 U.T.
 Spectroheliograph - H α - (down-time)

Sky Condition clear - some breeze/p

Solar Limb: Excellent - (breeze bothering image, somewhat/p)

Apparatus Used: Spectroheliograph - H α - (intermittent views only)

Remarks: Small bright Surge just South of small active Prom - Descending material "met" same, when whole combined" to form taller column - then - all velocities were radial away from limb. 15 min - descent — 5 min ascending - (combined).
