

Date: 14 April, 1965

Observer: Parmenter

Times: around 20:00 ut. (short observation)

Sky Condition: mostly clear — Some "haze" + "hazy" clouds about.

Solar Limb: Very good

Apparatus Used: 7" Image "Ploter" — 10" aperture Spectrohelioscope (Ha)

Remarks: B. faculae not in evidence today in spot-areas, and

Ha flaring not so strongly shown. — (good Ha contrasts)

(observation taken while doing further work on tower)
