Observer

Date: 13 March, 1968

Observer: Parmenter

Times: 19:00 UT. \_\_\_\_\_ 19:19 UT. \_\_\_\_\_

Sky Condition: <sup>"Plotter"</sup> Partially clear (large openings)

Solar Limb: Very good.

Apparatus Used: 7" Image "Plotter" \_\_\_\_\_ No H $\alpha$  observations

Remarks:

(mirrors removed from tower for re-aligning)  
The S.W. "Bright faculae" at "X" so very vivid around 19:15 UT. as to be considered here near "white-light" flare stage.
