

REC'D WDC-GAG 10 APR '69

Date: 29 March, 1969

Times: 18:04 UT — 18:15 UT — 18:17 UT

Observer: Parmenter

Sky Condition: "Plotter" / partially clear

Spectroheliograph > H α

Solar Limb: fair (thin cloud strata botharing)

Apparatus Used: 7" image "Plotter" — 10" aperture tower Spectroheliograph > H α

Remarks:

The N.E. Class I N "flare" has probability of being a Class 2 N for extent of area — but not in brightness. (considerable intermittent rearrangements)
